

FAQ ID # 117

esri offline mac address

Last Update : 2010/05/04

Rating : Not Rated

Question / Issue

I've been using a USB key to run my ESRI software offline. I would now like to switch to using the MAC address of my computer k on the USB key. How do I fix this?

Answer / Solution

1. Delete all .lic files from the LM folder (C:\Program Files\ESRI\License\argis9x\)
2. Copy the license file to that folder and rename it to a .lic file type.
3. Open it in notepad and format to begin with a SERVER line, then a VENDOR line, then alternating FEATURE/<tab>, I FEATURE/<tab>. Also remove the MAC_ADDRESS= from the SERVER line if it is still there.
4. Reboot your computer
5. Make sure Desktop Administrator is set to localhost or the actual computer name.
